The portable compressor production facility at KAESER's headquarters in Coburg

Application-Specific Portable Compressed Air

KAESER Kompressoren is one of the world's leading manufacturers and providers of compressed air systems. Innovation, reliability and ever decreasing energy consumption are product trademarks of the German company established in 1919 in Coburg, Northern Bavaria.

Investment in the new 'MOBILAIR' portable compressor production centre signifies a landmark in the history of the company and illustrates KAESER's continued commitment to produce application-specific, quality compressed air equipment with unrivalled reliability. Named after the portable compressor range of the same name, the 'MOBILAIR' centre represents one of a series of major projects designed to deliver the essential resources required to meet future glo-

bal market demands. The production centre was inaugurated in Spring 2002 and is located directly next to KAESER's main production headquarters.

The new facilities contain the very latest equipment and are designed to maintain and extend KAESER's competitive edge.

Amongst the many state-of-the-art systems KAESER has at its disposal are a TÜV (German Technical Inspection Agency) certified sound testing area for free-field sound level measurement and a complete powder-coating installation. The portable compressors are manufactured in the 15,000 m² production facility by highly trained specialists who, with minimal lead-time, are able to produce 'MOBILAIR' units to meet any number of specific customer requirements. Modern logistics infrastructure and production processes ensure maximum flexibility, as product quality and reliable delivery are top priorities at KAESER.

Also located at KAESER's main works, and just a few metres away from the 'MOBILAIR' facility, is the new Research and Development Centre, which was opened in January 2004.

It will enable the company to bring customer-focused products and innovations to the market more quickly and to operate even more efficiently.

With almost 3000 employees worldwide and additional production centres in Gera (Germany) and Lyon (France), KAESER is represented in every major industrial nation throughout the world.

Rotary screw compressors with SIGMA PROFILE 

Secotec refrigeration dryers with energy-saving control

Energy-saving compressor controllers with Internet technology

Compressed air treatment (filters, condensate treatment, desiccant dryers, activated carbon adsorbers)

Rotary blowers with OMEGA PROFILE 

Portable compressors with SIGMA PROFILE and Antifrost Control  

Reciprocating compressors for trade and industry

Boosters up to 45 bar

Built for a Lifetime!
